PHASE 3 – PROJECT DESIGN

1. Project Title

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

2. System Design

The system is designed to automate the Standard Laptop procurement process using ServiceNow Flow Designer.

The design connects the Service Catalog request, approval process, Flow Designer automation, and Catalog Task assignment.

3. System Components

The main components of the system are:

1. **Service Catalog** – Used to request a Standard Laptop.
2. **Approval Process** – The laptop request is approved before processing.
3. **Flow Designer** – Automates the procurement workflow.
4. **Create Catalog Task** – Automatically creates a configuration task.
5. **Hardware Group** – Receives the task for laptop configuration.

Laptop Configuration

5. Flow Design

When a Standard Laptop request is approved, the Flow Designer process creates a Catalog Task.

The Catalog Task contains the required configuration information and is assigned to the **Hardware** group.

6. Design of the Automated Process

Input

Standard Laptop request submitted by the user.

Process

1. User selects Standard Laptop.
2. User submits the request.
3. Request goes through approval.
4. Approved request triggers the Flow Designer.
5. Flow Designer creates a Catalog Task.
6. The task is assigned to the Hardware group.

Output

The Hardware team receives the laptop configuration task and processes the laptop configuration.

7. Expected Design Outcome

The system design provides an automated flow for Standard Laptop procurement. It reduces manual intervention and helps the Hardware team receive configuration tasks promptly.

8. Conclusion

The project design defines how the Service Catalog, approval process, Flow Designer, Catalog Task, and Hardware group work together to automate Standard Laptop procurement.
