PHASE 6 – PROJECT TESTING

1. Project Title

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

2. Testing Objective

The purpose of testing is to verify that the Standard Laptop request is processed correctly through the automated Flow Designer workflow.

3. Test Cases

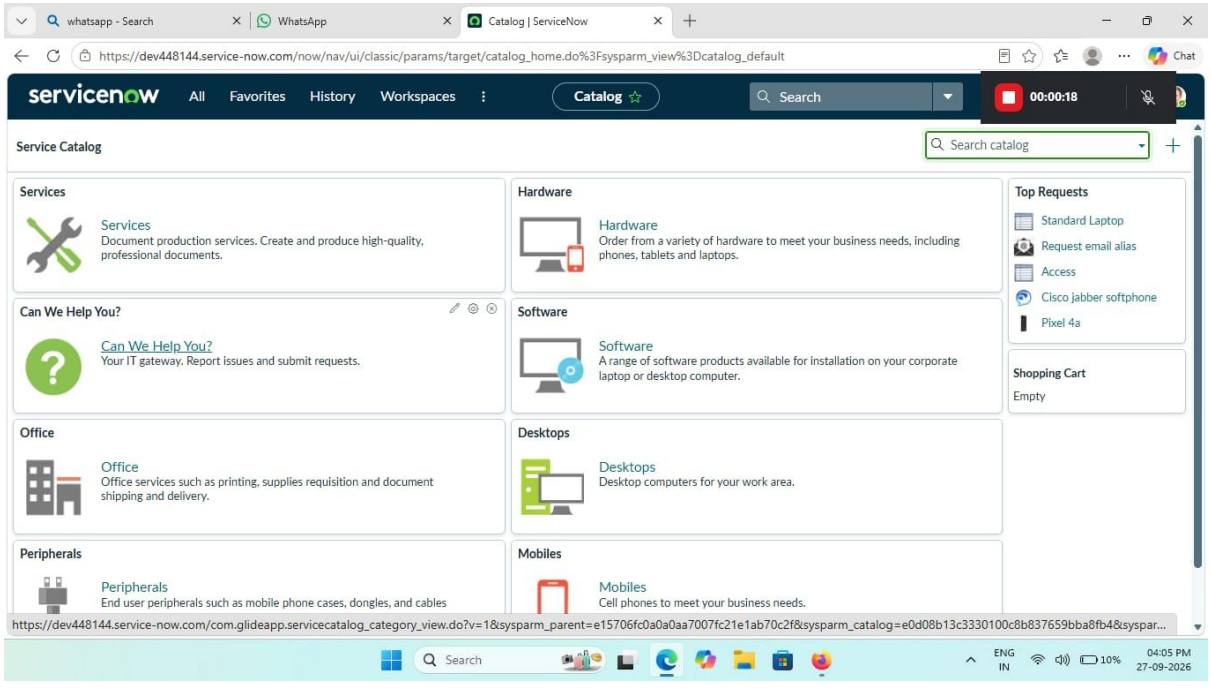

Test Case 1 – Standard Laptop Order

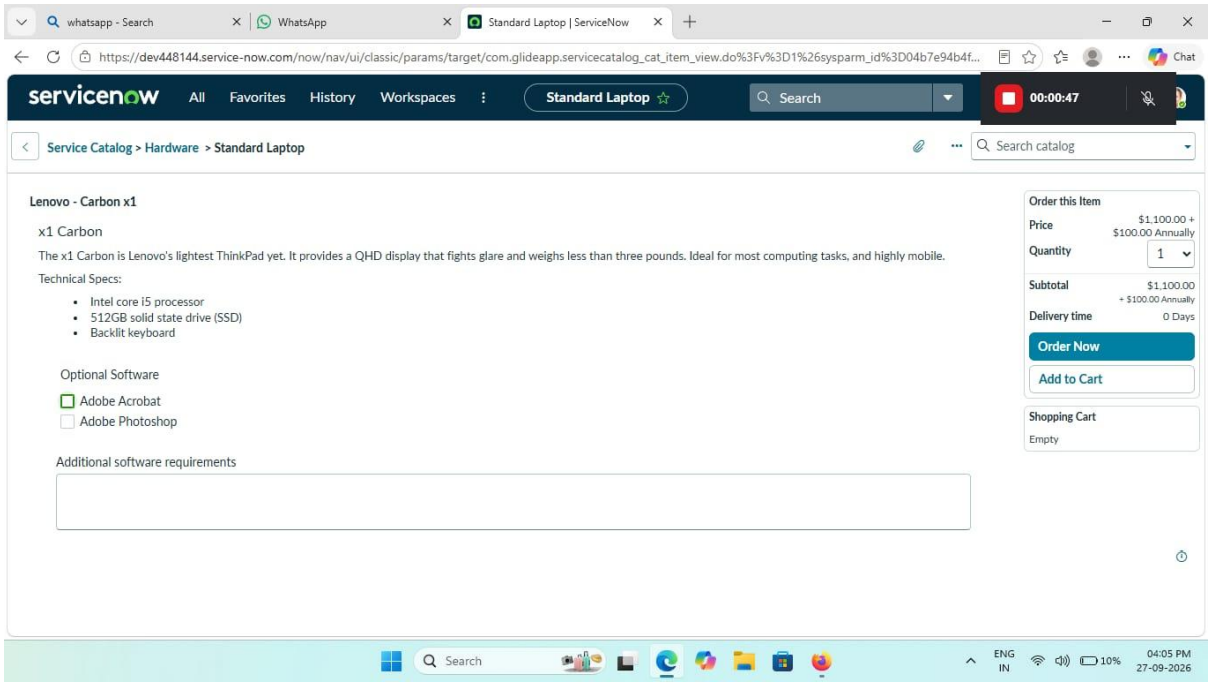

Action:

Open Service Catalog → Hardware → Standard Laptop and select **Order Now**.

Expected Result:

The Standard Laptop request should be submitted successfully.

Test Result: Pass

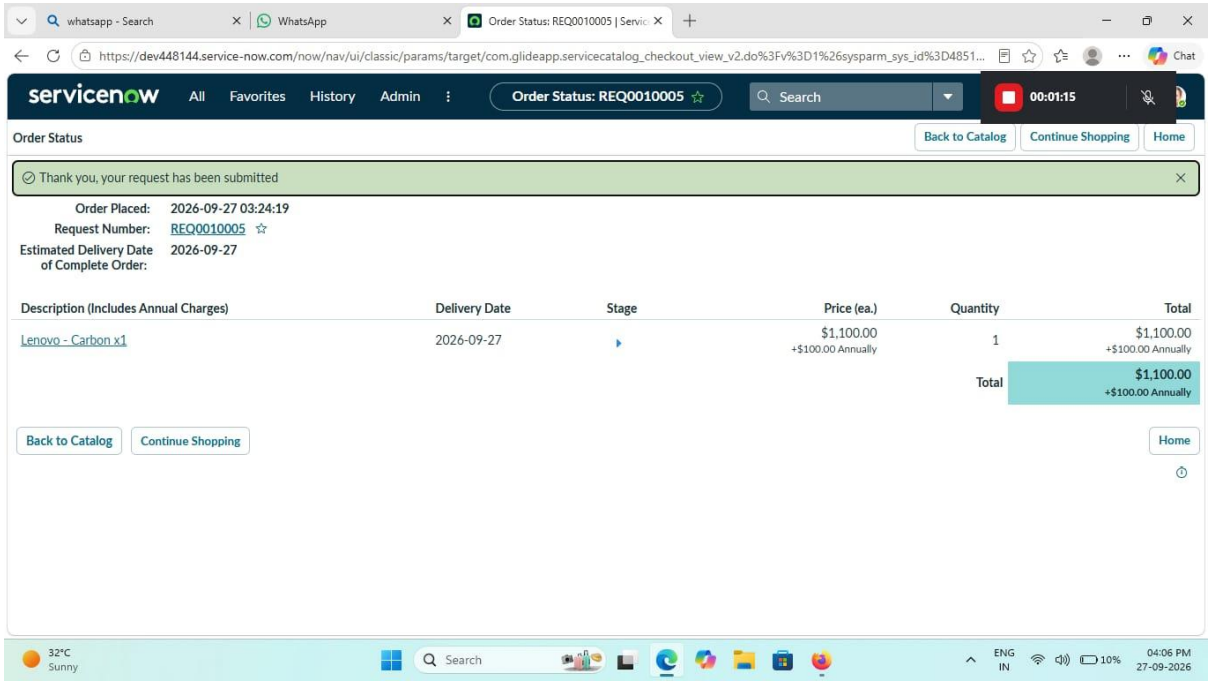

Test Case 2 – Request Approval

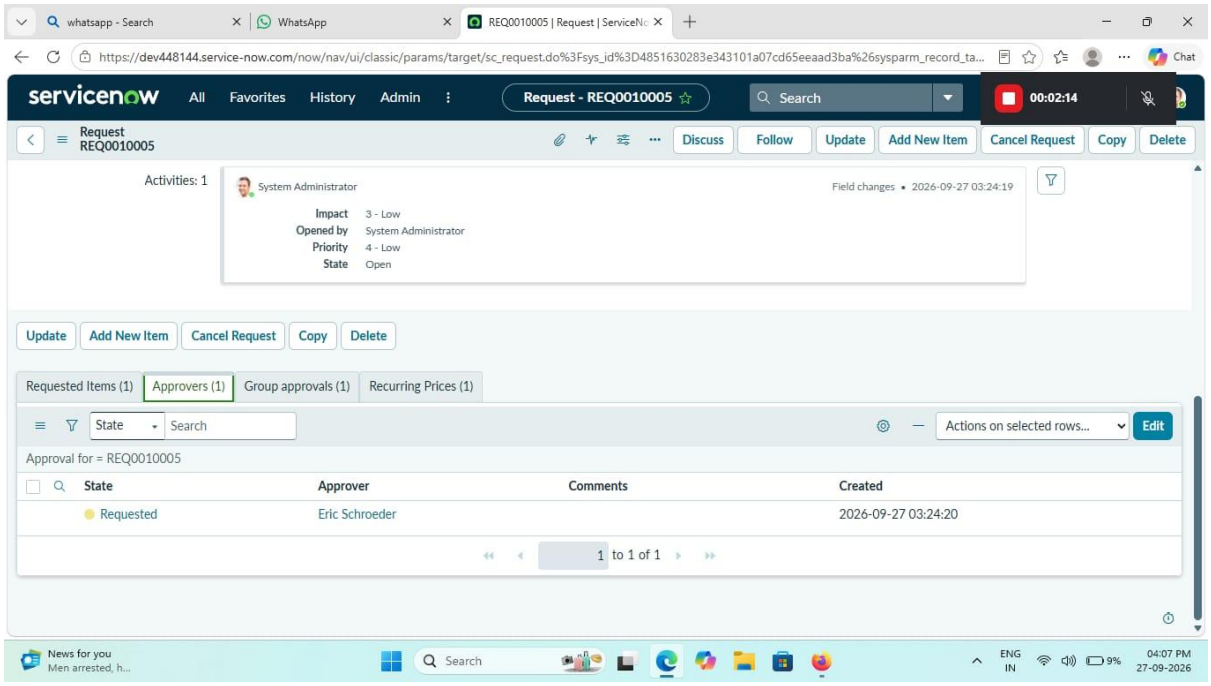

Action:

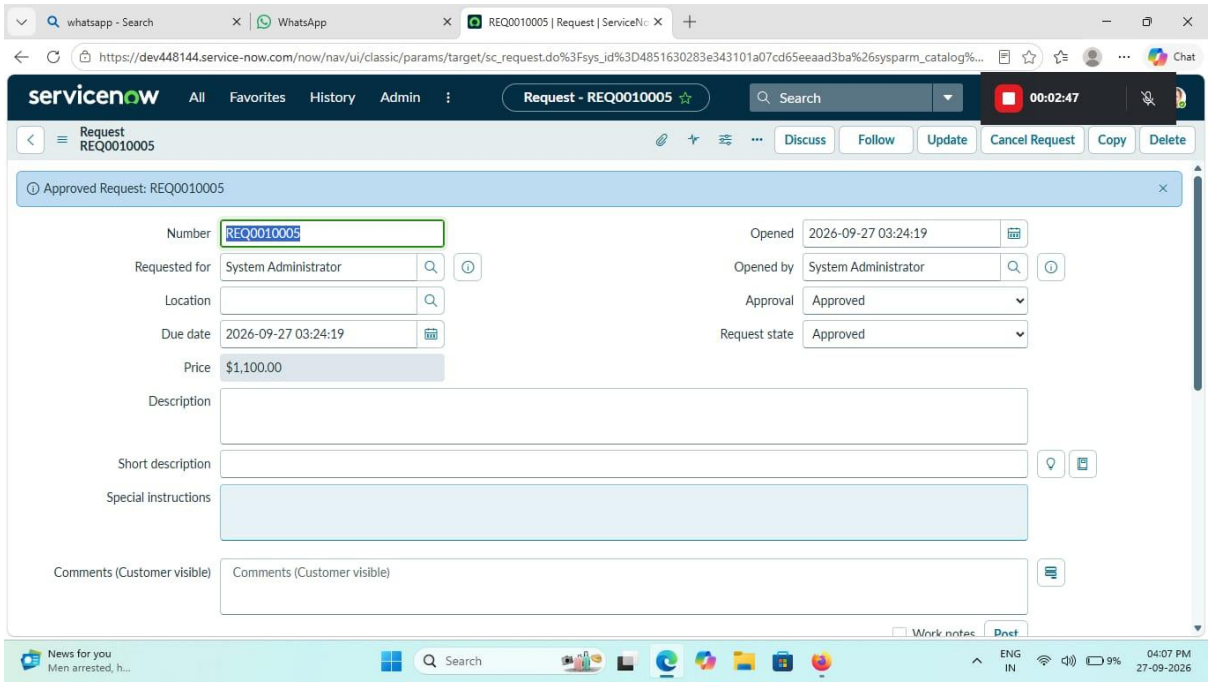

Check the request and Approvers, then approve the request.

Expected Result:

The request should be approved successfully.

Test Result: Pass

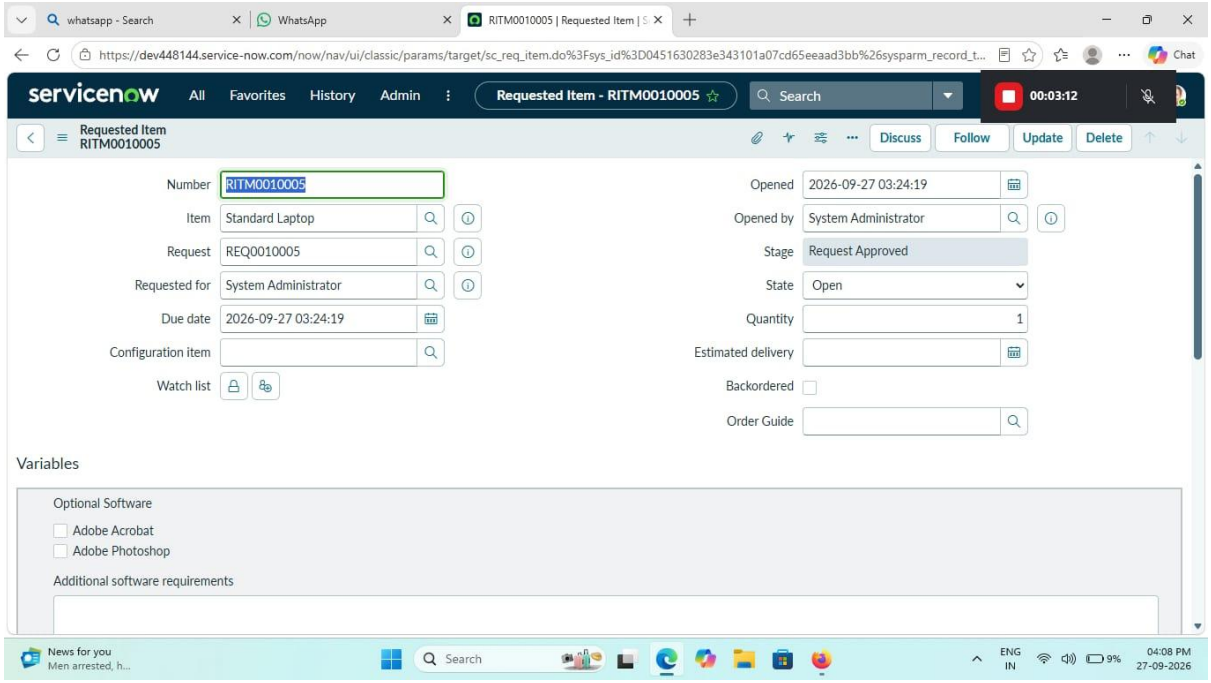

Test Case 3 – Catalog Task Creation

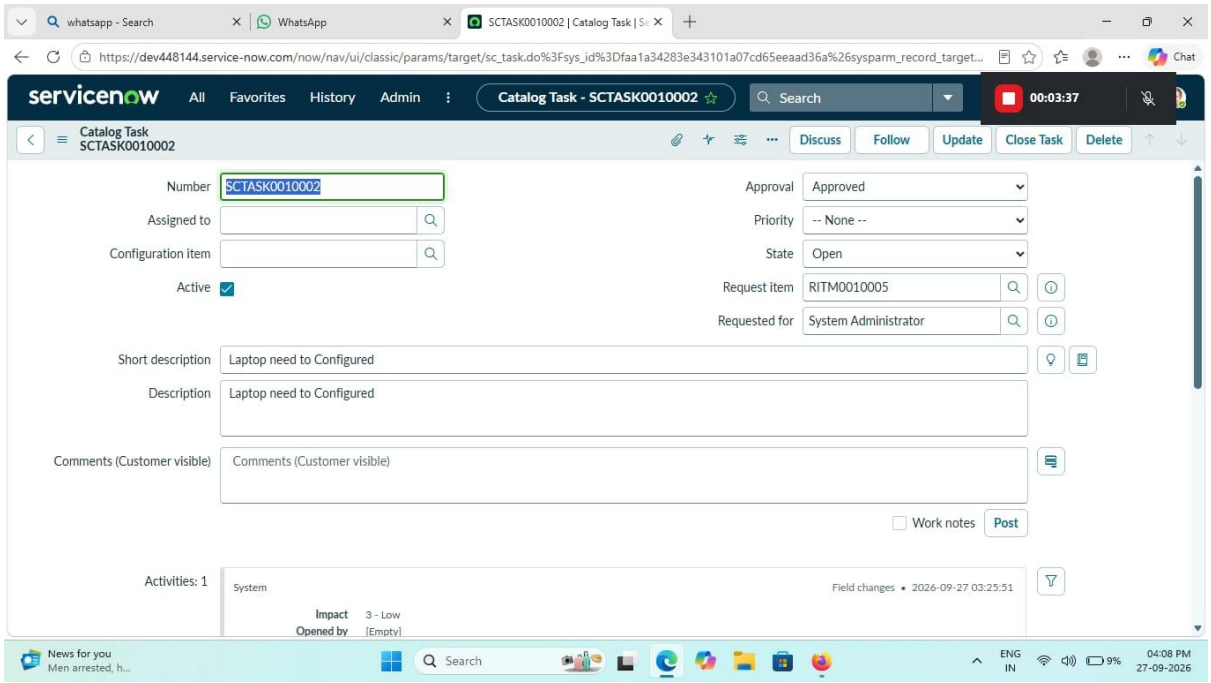

Action:

Open the Requested Item and check the Catalog Tasks.

Expected Result:

A Catalog Task should be created automatically after approval.

Test Result: Pass

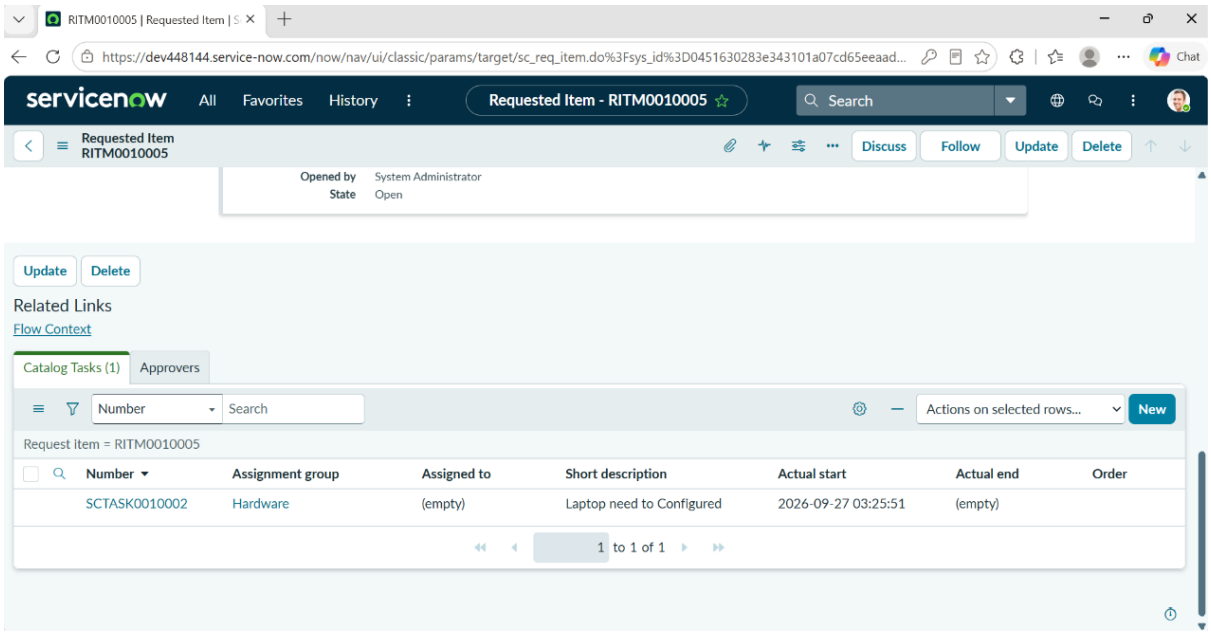

Test Case 4 – Task Assignment

Action:

Check the Assignment Group of the created Catalog Task.

Expected Result:

The task should be assigned to the **Hardware** group..

Test Result: Pass

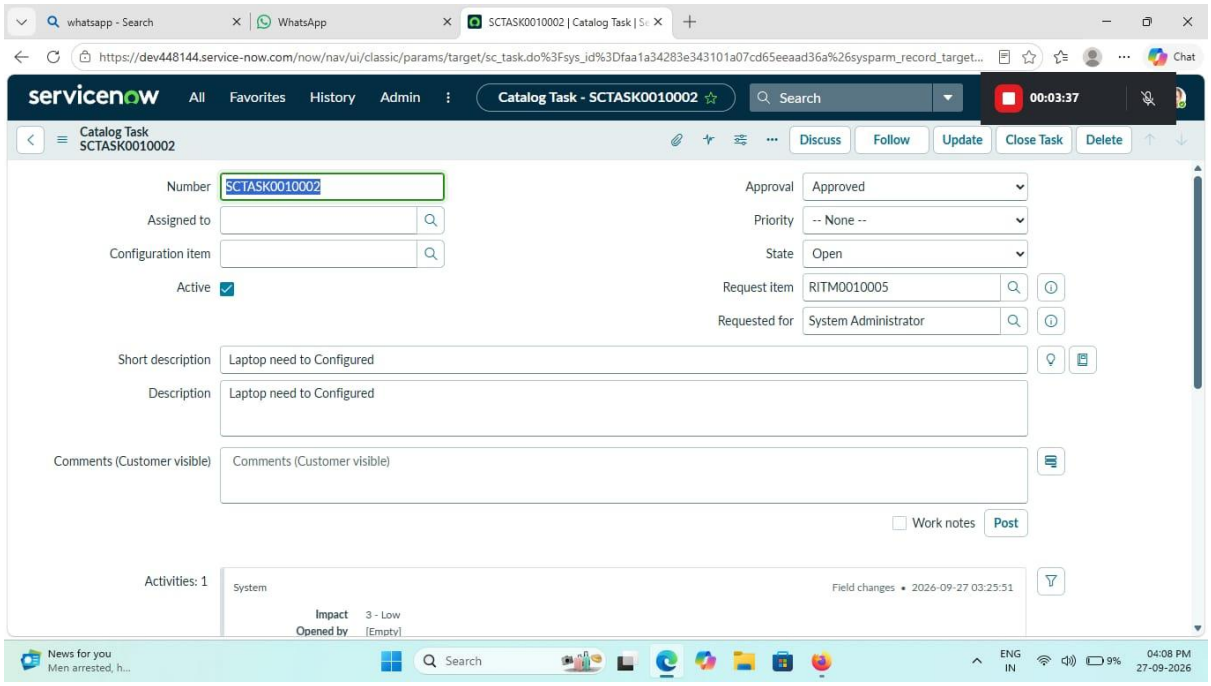

Test Case 5 – Task Details

Action:

Check the task State and Short Description.

Expected Result:

The task should show the required status and the description **“Laptop need to Configured”**.

Test Result: Pass

4. Test Evidence

The following screenshots are used as evidence of the testing process:

1. Standard Laptop – Order Now
2. Request / Order Status
3. Approvers
4. Approved Request
5. Requested Item
6. Catalog Tasks
7. Catalog Task details showing:
    - State
    - Short Description
    - Assignment Group = Hardware

5. Final Test Result

The testing confirms that the Standard Laptop request can proceed through the approval process and generate a Catalog Task for the Hardware group.

6. Conclusion

The testing phase verifies the main functionality of the automated Standard Laptop procurement process. The workflow successfully creates and assigns the configuration task after the request is approved.
